

# The George Adamson Wildlife Preservation Trust

newsletter 2008/2009

## Mkomazi National Park (MNP)

The signboard is up, an outcome that was a distant vision 20 years ago when the Government of Tanzania (GoT) asked the George Adamson Wildlife Preservation Trust (GAWPT) to join with them on a programme of rehabilitation of a long-degraded area with Tony at the helm.

Semu Pallangyo, Manager, Mkomazi Rhino Sanctuary, on patrol

From left: Mkomazi National Park – new sign board. Sunbird – David Pluth. Giraffe – David Pluth. Nina's male calf with the adult bull elephant.

TANAPA have taken over the administration of the park; a new General Management Plan will be prepared; tourism is slowly increasing and will open up under TANAPA; back-up to the management and infrastructural development continues; rhinos are doing well, as you can see, although there is a clear need to bring in more to reach the viable founder population; wild dogs are still breeding and reintroductions have been a 60% success; a further nine primary and secondary schools have been assisted and the environmental education programme has been a great success with

an impact on the pupils substantially beyond expectations.

As with most wildlife field-work, the rules are basic; keep working, keep maintaining, keep planning and keep it simple. Whichever discipline is being attended to, everything is based around practicality. We are immensely proud of our Tanzanian work-force, most of whom have been trained by Tony, who handle the huge responsibility of the work here in Mkomazi at every level. It must be time to write a summary document on how Tony, supported by all the Trusts, undertook The Mkomazi Project with the GoT, yet how

does one quantify the integrity and loyalty of the Tanzanian personnel, the workshop burden, the construction work, the politics, the breakthroughs and the huge efforts of our Trustees and supporters who have guided and steered this programme through all the challenges.

Our sincerest thanks, as always, go to our Chairmen, Trustees and administrators who have continued to give freely of their time to this undertaking; and to the supporters whose generosity has kept it all going. They should all take much of the credit for the success of this project, but there is still more to do.

Rose with her second calf – a female – born in February 2009

## Now for the detail...

Drilling for water

# Mkomazi National Park Infrastructural development

The Chief Park Warden, Mr Mnyagatwa, has taken up the reins of managing MNP and we meet with him regularly to discuss work issues and plans. Our local Trustees have called for a meeting with the Director of Wildlife and the TANAPA authorities to formalise the relationship between our local Trust – Wildlife Preservation Trust Fund (WPTF) - and the new administration. There are complexities involved in this (having just said it was simple...), but these are mainly based on writing a new, straight-forward template for a small wildlife trust such as WPTF to work in partnership with TANAPA after 20 years with the Wildlife Division (WD). TANAPA is also preparing a new general management plan for the park.

Wilfred Ayo fixing plant machinery

In the meantime we have been pleased to welcome many senior personnel from TANAPA including the Chairman of the Board of Trustees, the Trustees, the Director General, the Director of Conservation, the Director of Ecological Monitoring, the Director of Finance and the PR department.

We were very pleased to see Erasmus Tarimo taking over as Tanzania's Director of Wildlife. Since his Directorship commenced, he has addressed many of our issues with sincerity and candour. Importantly, he has given his formal endorsement for work to move forwards, having been involved with The Mkomazi Project since inception and having understood the challenges that have faced us over the years.

Taking the piston out of the aircraft

During the period of transition between Game Reserve and National Park administration, our plant and machinery continued to work on road networks, firebreaks, airstrip maintenance and dam de-silting. Suzuki Rhino Club (The Netherlands), IFAW and TUSK Trust provided the funding to carry out this essential field

Chairman, Director General and Trustees of the Board of TANAPA visit with Mr Mnyagatwa, Mkomazi Chief Park Warden

work. Sir Anthony Bamford and JCB in the UK donated an entire new gear box which was fitted in the workshop by Tony and Fred, as well as new tyres and general spares. The aircraft continued to fly on operational patrol and back up to rangers in the field – IFAW again supporting the aircraft fuel and maintenance costs. The Richard and Rhoda Goldman Fund, Tom and Nancy Gallagher, George Mavroudis and Charles Klein also supported these crucial costs during the transition period.

Toyota Landcruiser, donated by IFAW

IFAW generously donated a vehicle which has done more to help the considerable journeys between Mkomazi, Dar es Salaam, Nairobi and Kora than we could ever express adequately in writing, let alone the boost to the morale of the workshop personnel.

Aircraft maintenance

With thanks to the World Society for the Protection

of Animals (WSPA), WPTF employed a mobile team who patrol on foot on the periphery of the Rhino Sanctuary and the park in general to try to reduce poaching and snaring. Within the first month, the team recovered up to 300 snares and continued apace with great results over the following months. Significantly, WSPA also donated a vehicle for back-up to the mobile team as well as field training, which included provision of a camera and a GPS. The Conservation Director of WSPA spent a week in the field with a consultant from MWEKA College for African Wildlife Management to train the team in field and data reporting and use of the GPS.

During the 2007 Christmas period, there were many serious cattle incursions (sometimes up to 10,000 head of stock) and our teams were asked to join stock-patrols with TANAPA and WD rangers, the District and village field-force, split into three mobile units with WPTF also providing fuel and a vehicle. These joint patrols also took place during the first half of 2008 and the TANAPA officers commended the WPTF personnel on their discipline and hard work, often under tough conditions. The two permanent security outposts at Maore and Kifakua, constructed and staffed by WPTF, continue to provide security for the area.

Friends of Serengeti Switzerland donated a generator, shipped from China, and one of the most crucial pieces of equipment in the workshop. GAWPT and Suzuki Rhino Club have both sent in containers of much needed spares. Royal African, through Peter and Julianna Silvester, gave a donation to help upgrade the base-camp, so we were delighted to put this to full use. The camp and our guest tents look really wonderful.

MWEKA College for African Wildlife Management sent in 98 students to learn about the endangered species programmes and the environmental education programme.

We were also honoured to receive a visit from the wildlife authorities of Ethiopia and Sudan who were in Tanzania looking at rehabilitation and endangered species programmes from which to identify suitable policies for their own countries. They spent time in camp, the Rhino Sanctuary and at the wild dog breeding compounds. We held extensive discussion on how The Mkomazi Project was carried out in general and the endangered species programme in particular. It was a fascinating visit, which also gave us insight into their own policies and visions for the future.

The short rains this year were too short and yet amazingly the park still looks lush. We have seen herds of over 300 elephant, over 100 buffalo and strengthening populations of lesser kudu, giraffe, oryx and eland.

# Mkomazi Rhino Sanctuary (MRS)

The resident rhino population is doing well. Another female (who arrived with the second translocation) has had a male calf (Billy) so currently three out of four of our adult females are breeding. Yet tragically, we lost a male calf to a sudden-death black mamba snake bite, with the autopsy carried out by the Tanzanian Wildlife Research Institute.

The main and most crucial priority is to increase the founder population to at least 12 or 15 rhino in order for it to be viable and for it to expand. We have had to be extremely patient on this over the past few years. The good news is that Dr Dana Holeckova, the Director of the Dvur Kralove Zoo in the Czech Republic, visited Mkomazi with Dr Hamish Currie of Back to Africa and agreed in principle to donate 3 black rhino (*Diceros bicornis michaeli*) to the MRS. The Director of Wildlife gave his formal endorsement and we are currently preparing for this transfer with all the protocols and processes it involves. Dr Peter Morkel will undertake the translocation.

The Sanctuary needs to be extended to prepare for these animals and we are very grateful to US Fish & Wildlife and the Rufford Maurice Laing Foundation for providing the necessary funds for this extension. The reasoning behind this is:

- The resident rhino have well established home-ranges and territories.
- Any incoming rhino will put pressure on these ranges and territories.
- There is a need to extend the natural water sources and the new proposed area will enclose four natural water pans.
- The females and calves have settled in an area of good vegetation and the extension will also enclose more of this vegetation.
- The sub-adult male (Billy) will soon move away from his mother and he will need to establish his own territory without upsetting or disturbing the resident bulls.

The solid and secure systems that allow us to run the MRS at such a professional level are due to the support and loyalty of the Suzuki Rhino Club and Ted van Dam, TUSK Trust, IFAW, Swordspoint Foundation, Save the Rhino, Chester Zoo, Friends of Serengeti Switzerland, as well as many other committed individuals, to name but a few – Ed and Liberty Zwick, Tim Peet, Tim Oliver, Sharon Allen and Diane Ferguson.

The Suzuki Rhino Club have put on more corporate fundraising events, one of which was attended by the Director General of TANAPA, Gerald Bigarube. We were also really pleased to welcome 45 of the Suzuki Sales and After-Sales teams to Mkomazi who came to see the project in the field. Richard Ruggiero of US Fish & Wildlife visited and we were very pleased to be able to show him and his family the results of the support his organisation has given – this includes a borehole for direct water supply for the rhinos, a vehicle, binoculars, night vision equipment and trained personnel.

The MRS personnel continue to uphold their reputation as one of the most hard-working, disciplined and loyal workforces in African wildlife conservation. Daily operations are arduous and it is through the integrity of the sector leaders that everything is maintained. Again, we are grateful to IFAW for supporting these key personnel and sector-heads. 18 rhino rangers from Serengeti National Park visited the sanctuary to receive operational training and their feedback was very positive.

Ted van Dam, Suzuki Rhino Club, with Semu Pallangyo, Mkomazi Rhino Sanctuary Manager

Suzuki Rhino Club raise the flag

Environmental Education bus 'Rafiki wa Faru' with pupils on board looking at rhinos – David Pluth

A 'crash' of rhino drinking

Suzuki Rhino Club generously donated 3 new vehicles (2 specifically converted off-road Grand Vitaras and a Jimny) which will greatly relieve the burden on maintaining the old vehicles. The workshop personnel can keep a vehicle going for about 15 years but after that, even they have to admit defeat, especially with the workload and the condition of the roads and the bush.

The EAZA / Save the Rhino-funded Massey Ferguson tractor is hard at work maintaining the fence-line, the roads and firebreaks so work that would normally have taken two weeks now takes three days.

And finally... more words of thanks; to Guy Farley and Patrick Folkes who ran the Lewa Marathon for TUSK Trust and dedicated the funds raised in sponsorship to GAWPT for the rhino programme.

# African Wild Dog Breeding, Veterinary and Re-introduction Programme

The past year has focused mainly on reintroducing some of the wild dogs we have bred back into the Mkomazi / Tsavo ecosystem. We have had success, semi-success and a disaster. The dogs that do well, do really well. For example, there is one pack of nine males that were released last year, six of whom were seen as recently as July 08 at Tsavo West National Park in Kenya. A second pack of five males and three females were re-introduced together and seven of them have been seen at Maore in Mkomazi. Recently a pack of eight wild dogs was seen at Kamakota and we were also sent photographs of wild dogs in Tsavo West – not from the breeding packs at Kisima but we were all pleased to see the return of wild dogs to the Tsavo / Mkomazi ecosystem.

The Tsavo authorities are equally pleased with the presence of wild dogs and are happy with our veterinary programme and how we manage the breeding facility pre-release. We try to keep track of them for about two and a half months and Tsavo give us information on dogs that are in their range.

We have had losses to a leopard shortly after release (we had underestimated the return of leopard to Mkomazi) and in December 07 during an unprecedented incursion of nearly 10,000 head of cattle into Mkomazi during the hand-over between the WD and TANAPA, one pack went after the goats owned by pastoralists and were killed. This is obviously horrendous for us but we have to learn from

Reintroduced wild dogs

Wild dog reintroduction compound

Feeding frenzy

Reintroduction area on the Mkomazi / Tsavo border

both our successes and failures, and tackle these difficulties. There is no magic formula, just trial and error and the attitude and cunning of the individual dog and, sometimes, good luck.

We are now back to the basics of breeding them up and reintroducing them back to the wild and running alongside this is the vaccination programme. WSPA kindly imported the distemper and rabies vaccine donated by Merial and Longleat helped with veterinary supplies.

As always, our sincerest thanks go to George and Natasha Duffield who have supported this wild dog programme for many years. Also to the Swordspoint Foundation which has been extremely generous to the whole project and, significantly, the wild dog programme. To Teresa and Stuart Graham who have given generous support to the wild dogs through TUSK. Finally to Martin Clunes who came with a crew to film the dogs and very kindly donated the radio collars used on released packs.

Tony joined with Olly & Suzi (wildlife artists) to give a talk at the Royal Geographical Society in November 07 in London on the plight of wild dogs as a species on the brink of extinction. It was an instructive talk, outlining the principles and practices of this programme here in Mkomazi, the methods through which the breeding, veterinary and reintroduction work is carried out, future visions and Olly & Suzi's work with these extraordinary animals.

As we move through 2009, we have four breeding groups at Kisima and we have been really pleased to show the Chairman, Trustees and Directors of TANAPA the workings of this endangered species programme.

Vudee Secondary School - 3 classrooms plastered & 4th completed, plastered and roofed

# Mkomazi Outreach Programme

2007-2009 has been an exceptional period for outreach work. Through the generosity of a UK foundation we were able to support the construction of classrooms in nine schools in the four districts surrounding MNP. This is a remarkable achievement and the District Commissioner of Same described WPTF as the one of the 'front-lines' of assistance to education in his district.

Elisaria Nnko, our operations manager, identifies schools needing priority assistance with each of the four District Commissioners (Same, Mwanga, Korogwe and Lushoto). Building materials are handed over during official ceremonies. WPTF then monitors the building work over the next few months tries to ensure that the job is completed as per the original specification.

We have given assistance to Secondary Schools in Vudee, Malindi Suji, Shighatini, Lunguza, Mapanda, Kisiwani and Gonja and Kivingo Primary School, We also gave a donation of building materials to Pangaro Primary School.

It was finally possible to deploy funds raised by Simone Motzko and GAWeV in Germany, to continue construction of the library at Hedaru Secondary School after the school had overcome its difficulties.

We are in the process of determining dates for the official handover of building materials to a further four secondary schools.

# Environmental Education Programme

## 'Rafiki wa faru'

We have now launched the Environmental Education programme, supported by TUSK, Chester Zoo, Save the Rhino and recently WSPA. This is an extraordinary partnership of four conservation organisations and we are extremely proud of the programme we have been able to put together with their funds and advice.

Environmental Education bus

This programme was developed for the benefit of the local communities, especially local school pupils, as through this initiative they will be actively involved in local environmental issues and wildlife, significantly the conservation of the black rhino and wild dog. Rafiki wa Faru means Friends of Rhino and hopefully some of these children will take up the baton as the next generation of Tanzanians to conserve endangered species.

Elisaria teaching pupils in the Environmental Education centre

The bus itself is a fantastic sight. Painted in tingatinga style, it is a large and dramatic education tool in itself. All the Tanzanians who visit our project think it is really wonderful - we wish we had recorded all of their comments. The actual classroom is built high on a hill in the Rhino Sanctuary with breath-taking views. TUSK, SRI and Chester Zoo all funded construction of this classroom and it is now furnished with benches, desks, education materials, solar power, a generator and a big TV. It also has an outside eating area for the pupils and pit latrines. SRI have donated educational materials and prizes for the school pupils and Chester Zoo are producing more teaching resources and posters.

Pupils outside the Environmental Education Centre

Elisaria Nnko has taken on the duty of Education Officer. He has travelled with the Wildlife Clubs of Kenya and the Laikipia Wildlife Forum to broaden his knowledge and also received training from Maggie Esson, the Education Programmes Manager of Chester Zoo.

For the first year, the daily session follows the outline advised by Maggie. The pupils are all from Form 1 of the secondary schools (aged approx 15 years old). 27 pupils and 2 teachers are collected by the bus from Same or Kisiwani and brought into Mkomazi. They visit the wild dog programme, the workshops and the water-catchment projects at Kisima. They then head to the MRS and the Environmental Education Centre where they have a 20

minute lesson about conservation, a 10 minute DVD about rhinos and Mkomazi, followed by lunch, a re-cap and an activity. They meet the Mkomazi Rhino rangers, visit the rhino observation bunker, hopefully see a rhino and are taken back to Same or Kisiwani at the end of the day. After each session, we give out review sheets for the teachers to complete and Elisaria fills in his own session form for review.

Group of school pupils after a day in the Mkomazi Rhino Sanctuary

The programme was launched in June 08 and at the time of writing (February 09) we have brought in over 700 school pupils and 70 teachers. Maggie Esson is considering presenting this programme at an upcoming rhino forum.

Secondary School pupils from Kilimanjaro at wild dog compound

# General, trustees and travel

Ethiopian and Sudanese wildlife authorities visit Mkomazi

Visit by the Trustees of GAWPT, the Mortimers, Toulsons and Kents

The Chairman and Trustees of WPTF continued to give support, valuable advice and direction on all aspects of the project.

We were delighted to welcome Trustees from the various GAWPTs and the trustees and directors of many of the groups that support us.

Our thanks as always to the Patron of GAWPT, HRH Princess Michael of Kent, who continues to give her support and friendship.

Thanks also to the Friends of Mkomazi (a group of long-standing friends and individuals who support GAWPT in the UK and the USA), Mazao/Neumanns, Indigo Telecommunications, Moritz Borman, Tom Garvin and Mark and Lee Shanker.

**Stop Press...** In Feb 2009, just as the newsletter was going to print, Rose, one of the females that came with the first translocation of rhino in 1997 came to the water hole with her second calf, a female!

**Christian the Lion:** An extraordinary event took shape in 08 on YouTube. It showed a clip from a 1970's film about Christian - a lion that one of GAWPT's Trustees, John Rendall, bought from Harrods with his friend Ace Bourke. They looked after Christian for a year in London and then took him out to George Adamson and Tony to be reintroduced back into the wild in Kora. YouTube showed footage of Christian being reunited with John and Ace after he had been reintroduced back into the wild. It received over 45,000,000 hits!!

George Adamson and Christian

Tony Fitzjohn and Christian

Kudu running – David Pluth

Lucy Mchana, Mkomazi Rhino Sanctuary Security Guard

And finally.....to four people who captured the imagination of all of us who work here in Mkomazi; The Cycle of Life: Barty, Chris, Andy and Jess, who cycled with true courage and determination all the way from Namibia to Kenya for TUSK Trust – a distance of over 7,000 kms, in the most basic conditions with the most basic kit. This massive endeavour raised a huge amount of money for charity. After a few days in Mkomazi, they departed at sunset over the horizon on the vast tarmac roads of Tanzania and we all agreed that we don't get to meet adventurers like that very much any more.

Our work at Mkomazi is far from over. National Park status has not diminished our enthusiasm for still greater progress in tandem with TANAPA so we look forward to your continued and much appreciated support.

As for the UK blog, DOTTY RHINO, it continues to prove very popular with youngsters and generates a lot of interest so keep blogging .... Dotty and her friends would like to hear from you - they have all the latest news and some great merchandise. [www.dottyrhino.com](http://www.dottyrhino.com).

5H DOG on patrol

# KORA National Park, Asako village, Kenya.

By Tony Fitzjohn

George Adamson loved Kora as one of the last true wildernesses in Kenya. Inaccessible, thorny and boiling hot as it was, it was ideal refuge for him, his lions and his ideals although he was under enormous pressure from Somali tribesmen, their stock and their guns. Ultimately he fell to their guns, but that was something we were both prepared to accept for the privilege of the way of life there and what we were able to achieve.

George desperately wanted me to continue his work there and to make sure that all our efforts had not been in vain. It was out of the question at the time as the politics then were in disarray and I had taken on The Mkomazi Project in Tanzania in George's name, which was and still is a difficult and time-consuming task with never an end in sight.

Times have changed. Domestic stock is still a problem in Kora with on going pastoral incursions.

But the Kenya Wildlife Services (KWS) are determined to rehabilitate Kora as part of the Meru conservation area. They have a multi-disciplinary approach to the problem and we are confident that they will make it work. Poaching of the large mammals has abated almost completely. There are signs of elephants throughout Kora. A 3 pm river game drive in February 09 showed considerable and diverse numbers of wildlife in spite of the mess of domestic stock around. A commercial tourist venture with a camp on the river is about to go ahead.

Two permanent bush towns, Boka and Kamaguru, have emerged on the eastern boundary. Settled communities have more to lose and wish to be seen to be adhering to the laws and supporting the work of government forces in the field.

For the past few years I have been making the occasional trip up to Kora. We have rebuilt George's old camp in a simple fashion and kept a couple of staff in the camp. Roads have been cleared with limited assistance from GAWPT and a presence kept there. The Born Free Foundation and CMC in Nairobi (thanks to Martin Forster) generously agreed to my request to pay for a complete overhaul of the Kora tractor for KWS.

KWS have been great. They have a professional and dedicated work force in place who make serious decisions on wildlife preservation. For all these years they have kept a presence near George's camp, as well as the graves of him and Terence his brother, which were at one stage vandalised. It must have been a considerable cost to them but there are always KWS rangers there to ensure that the camp and graves are not burnt down again.

GAWPT has also contributed in many ways to the welfare of the local villagers in Asako village with food, Flying Doctor visits, dispensary help and water projects, including a 30 foot water windmill pump. Prince Bernhard Fund for Nature,

Kora National Park

Hornbill – David Pluth

A FEW US, Just a Drop and a UK charitable foundation were all involved in this incredible assistance. Ruth Ng'anga kindly runs the accounts in her free time.

The well serving the water windmill pump in Asako needs to be deepened to find quality drinking water as the pump is currently supplying more brackish water that is being used by the school for domestic purposes. Mike Harries is working on this and I'm sure it won't be too long before better and a more reliable supply of water is flowing to the fields, the village and the school in this barren and desolate area.

On recent visits with Trusts for African Schools, now contributing so generously to the welfare of the pupils and the teachers of the Asako Primary School, we became very impressed and then close friends with the young KWS warden in Kora NP, Mark Cheruyiot, who was our liaison officer.

Mark and Robert Njue (now KWS Assistant Director, Eastern Reserves), also visited us in Mkomazi to see how GAWPT operates and carries out projects in the field. Robert Njue then joined us on a visit to the Director of KWS, Julius Kipng'etich, and GAWPT was offered a very warm welcome back to Kora. Animal rescue programmes and the construction and stocking of a rhino sanctuary were discussed, as well as security, roads and outreach programmes. The Director was keen to have a life-size bronze sculpture of George with lions, pipe and rifle on the road leading into his camp.

It was a great honour to sit with the Director of KWS and be offered a welcome to return, contribute and participate in the rehabilitation of Kora National Park. Mark Cheruyiot has been promoted to KWS Senior Warden and is in charge of Meru National

With the Vice President of Kenya, Honourable Stephen Kalonzo Musyoka and his daughter

Park, overseeing Kora and Rahole. There are many challenges to face up there but we cannot afford to let the chance pass by, especially when we have been given such an extraordinary chance. We are working on a Memorandum of Understanding, talking to all our Trustees, looking for new support and the beginnings of a workable plan are taking shape.

We have started with work on the airstrip, the back road in and making George's camp habitable. A modest beginning, but it always will be, to keep within the spirit of George's memory and our limited finances. We will then turn the camp into a live-in museum that will bring back an atmosphere of the past, but with increased infrastructure and security.

Mkomazi National Park, especially the Mkomazi Rhino Sanctuary, still needs our full support, but with our highly motivated and well-trained team in place and TANAPA with the reins of the future in their hands, we will have more time to involve ourselves in Kora. We sincerely hope that you will join us in supporting Kora and our welcome back there.
